SKILLS

- Python Programming
- C++ Programming
- Cryptography and Encryption
- SRS Document Creation
- Software Engineering
- Data Structure and Algorithms

LANGUAGES

- English— Professional
- Urdu —Native

CERTIFICATES 2025

- Cybersecurity Awareness 2026
- Getting Started with Cybersecurity by IBM 2026
- Model Context Protocol (Advanced)2025
- Data Science & Analytics 2025
- Claude with Google Vertex AI 2025
- Introduction to Agent Skills 2025
- MS Word Specialist 2022
- Freelancing 2022

PROFILE

Cyber Security undergraduate (BS Cyber Security, UMT Lahore, GPA 3.78) with a strong academic foundation in cryptography, network security, and software engineering. Skilled in C++ and Python programming, classical and modern encryption techniques, and SRS document creation for software projects. Passionate about building a career in information security and network defense.

WORK EXPERIENCE

Cyber Security Student — Active Coursework

2025 - Present

UMT Lahore — Department of Cyber Security

- Developed and deployed independent cybersecurity applications, including a password strength & breach-detection tool and a rule-based conversational assistant, applying secure coding and API integration practices.
- Practiced secure handling of sensitive data using industry-standard techniques such as k-anonymity and cryptographic hashing (SHA-1) to protect user information during API-based breach checks.
- Built and tested interactive Python applications using Streamlit and Flask, strengthening skills in application security, session management, and user-input validation.

Software Engineering Project — SLMS

2026

UMT Lahore — Group Project

- Co-developed a Smart Library Management System (SLMS) with role-based access control for Student, Teacher, Admin, and Parent roles.
- Authored the full Software Requirements Specification (SRS) document covering functional requirements, use-case diagrams, DFDs, and system architecture.

PROJECTS

Cyber Security & Software

- Password Strength & Breach Checker — Flask · Python · HIBP API · k-Anonymity | Security tool that scores password entropy locally and cross-checks credentials against the HaveIBeenPwned breach database using SHA-1 k-anonymity, ensuring the real password never leaves the device.
- Rule-Based Chat Assistant — Python · Streamlit · REST API | Conversational assistant that matches user input against a rule-based keyword engine with word-boundary matching, falling back to a live Wikipedia REST API lookup for unmatched queries.
- Hangman Game — Python · Streamlit · REST API | Interactive word-guessing game with difficulty tiers, live word-API integration with offline fallback, and persistent session-state game logic.
- Smart Library Management System (SLMS) — React.js · Node.js · MySQL · Python | Fullstack educational platform with AI quiz generation, study recommendations, and role-based access control
- Hospital Management System — C++ · OOP · File Handling | Console-based system for managing patient records, doctor appointments, and billing — built using Object-Oriented Programming principles
- Cardiology Ward Management System — C++ · Data Structures · DSA | Implemented a ward management tool using DSA concepts (linked lists, queues, priority queues) to manage patient admission, discharge, and critical care prioritisation.

EDUCATION

BS CYBER SECURITY

2025 - 2029

UMT LAHORE

GPA: 3.78 / 4.0

INTERMEDIATE — ICS

PGC COLLEGE MUSLIM TOWN
LAHORE

completed 2025

MARKS: 940/1200

Matric-Computer Sciences

completed 2022

MARKS1018/1100
